MATLAB Mathematical Analysis

Cesar Perez Lopez

MATLAB Mathematical Analysis Cesar Perez Lopez

MATLAB Mathematical Analysis is a reference book that presents the techniques of mathematical analysis through examples and exercises resolved with MATLAB software. The purpose is to give you examples of the mathematical analysis functions offered by MATLAB so that you can use them in your daily work regardless of the application. The book supposes proper training in the mathematics and so presents the basic knowledge required to be able to use MATLAB for calculational or symbolic solutions to your problems for a vast amount of MATLAB functions.

The book begins by introducing the reader to the use of numbers, operators, variables and functions in the MATLAB environment. Then it delves into working with complex variables. A large section is devoted to working with and developing graphical representations of curves, surfaces and volumes. MATLAB functions allow working with two-dimensional and three-dimensional graphics, statistical graphs, curves and surfaces in explicit, implicit, parametric and polar coordinates. Additional work implements twisted curves, surfaces, meshes, contours, volumes and graphical interpolation.

The following part covers limits, functions, continuity and numerical and power series. Then differentiation is addressed in one and several variables including differential theorems for vector fields. Thereafter the topic of integration is handled including improper integrals, definite and indefinite integration, integration in multiple variables and multiple integrals and their applications.

Differential equations are exemplified in detail, Laplace transforms, Tayor series, and the Runga-Kutta method and partial differential equations.

What you'll learn

In order to understand the scope of this book it is probably best to list its content:

The MATLAB environment, numerical calculus, symbolic calculus, MATLAB and Maple graphics with MATLAB, help with commands, escape and exit commands to the MS-DOS environment, MATLAB and programming, limits and continuity, one and several variables limits, lateral limits, continuity in one or more variables, directional limits, numerical series and power series, convergence criteria, numerical series with non negative terms, numerical alternate series, formal powers series, development in Taylor, Laurent, Pade and Chebyshev series, derivatives and applications in one and several variables, calculation of derivatives, tangents, asymptotes, concavity, convexity, maximum, minimum, inflection points and growth, applications to practical problems partial derivatives, implicit derivatives, differentiation in several variables, maxima and minima of functions of several variables, Lagrange multipliers, applications of maxima and minima in several variables, vector differential calculus and theorems in several variables, vector differential calculus concepts, the chain rule theorem, change of variable theorem, Taylor to n variables theorem, Fields vectors,applications of integrals, integration by substitution (or change of variable) integration by parts, integration reduction and cyclic integration, definite and indefinite integrals, integral arc of curve, area including between curves, revolution of surfaces, volumes of revolution, curvilinear integrals, integration approximation, numeric and improper integrals, parameter–dependent integrals, Riemann integral, integration in several variables and applications, double integration, Area of surface by double integration,

calculation volume by double integrals, calculation volumes and triple integrals, Green's theorem, Divergence theorem, Stokes theorem, differential equations, homogeneous differential equations, exact differential equations, linear differential equations, ordinary high –order equations, linear higher-order homogeneous in constant coefficients equations, homogeneous equations in constant coefficients, variation of parameters, non-homogeneous equation

From reader reviews:

Matthew Segal:

What do you think of book? It is just for students since they are still students or the item for all people in the world, what best subject for that? Merely you can be answered for that query above. Every person has various personality and hobby per other. Don't to be pushed someone or something that they don't would like do that. You must know how great along with important the book MATLAB Mathematical Analysis. All type of book is it possible to see on many solutions. You can look for the internet resources or other social media.

Lois Maestas:

This MATLAB Mathematical Analysis book is simply not ordinary book, you have it then the world is in your hands. The benefit you receive by reading this book is definitely information inside this book incredible fresh, you will get facts which is getting deeper you actually read a lot of information you will get. This MATLAB Mathematical Analysis without we realize teach the one who looking at it become critical in considering and analyzing. Don't be worry MATLAB Mathematical Analysis can bring once you are and not make your case space or bookshelves' turn into full because you can have it inside your lovely laptop even telephone. This MATLAB Mathematical Analysis having excellent arrangement in word as well as layout, so you will not experience uninterested in reading.

Clare Lucas:

Hey guys, do you really wants to finds a new book to learn? May be the book with the concept MATLAB Mathematical Analysis suitable to you? The actual book was written by well known writer in this era. The particular book untitled MATLAB Mathematical Analysisis the one of several books that everyone read now. This specific book was inspired lots of people in the world. When you read this guide you will enter the new age that you ever know before. The author explained their concept in the simple way, therefore all of people can easily to be aware of the core of this guide. This book will give you a large amount of information about this world now. So that you can see the represented of the world in this particular book.

John Charles:

A lot of people said that they feel weary when they reading a book. They are directly felt that when they get a half parts of the book. You can choose the actual book MATLAB Mathematical Analysis to make your personal reading is interesting. Your own skill of reading proficiency is developing when you such as reading. Try to choose simple book to make you enjoy to see it and mingle the idea about book and examining especially. It is to be initial opinion for you to like to open a book and read it. Beside that the book MATLAB Mathematical Analysis can to be your brand new friend when you're truly feel alone and confuse using what must you're doing of their time.
