## **MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications** A. R. Jha

The integration of microelectromechanical systems (MEMS) and nanotechnology (NT) in sensors and devices significantly reduces their weight, size, power consumption, and production costs. These sensors and devices can then play greater roles in defense operations, wireless communication, the diagnosis and treatment of disease, and many more applications.

**MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications** presents the latest performance parameters and experimental data of state-of-the-art sensors and devices. It describes packaging details, materials and their properties, and fabrication requirements vital for design, development, and testing. Some of the cutting-edge materials covered include quantum dots, nanoparticles, photonic crystals, and carbon nanotubes (CNTs).

This comprehensive work encompasses various types of MEMS- and NT-based sensors and devices, such as micropumps, accelerometers, photonic bandgap devices, acoustic sensors, CNT-based transistors, photovoltaic cells, and smart sensors. It also discusses how these sensors and devices are used in a number of applications, including weapons' health, battlefield monitoring, cancer research, stealth technology, chemical detection, and drug delivery.

### **From reader reviews:**

#### **Catherine Rubio:**

Often the book MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications will bring you to definitely the new experience of reading a new book. The author style to explain the idea is very unique. Should you try to find new book you just read, this book very suitable to you. The book MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications is much recommended to you to learn. You can also get the e-book from your official web site, so you can quicker to read the book.

#### **Mary Bolinger:**

Many people spending their period by playing outside along with friends, fun activity using family or just watching TV the entire day. You can have new activity to invest your whole day by reading through a book. Ugh, you think reading a book will surely hard because you have to take the book everywhere? It ok you can have the e-book, taking everywhere you want in your Cell phone. Like MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications which is keeping the e-book version. So , why not try out this book? Let's observe.

#### **Christopher Arnold:**

As we know that book is important thing to add our expertise for everything. By a guide we can know everything we would like. A book is a group of written, printed, illustrated as well as blank sheet. Every year had been exactly added. This publication MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications was filled concerning science. Spend your extra time to add your knowledge about your technology competence. Some people has diverse feel when they reading the book. If you know how big benefit of a book, you can sense enjoy to read a publication. In the modern era like today, many ways to get book which you wanted.

#### **Ryan Barrett:**

That publication can make you to feel relax. This specific book MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications was colourful and of course has pictures on there. As we know that book MEMS and Nanotechnology-Based Sensors and Devices for Communications, Medical and Aerospace Applications has many kinds or variety. Start from kids until adolescents. For example Naruto or Private eye Conan you can read and believe you are the character on there. So , not at all of book usually are make you bored, any it offers you feel happy, fun and relax. Try to choose the best book to suit your needs and try to like reading that will.
