This text presents case studies of modern columns used in buildings today and demonstrates their continued significant purpose within architecture and how the historical precedents have been tailored for contemporary needs. Many of the author's own illustrations have been used in addition to the technical back-up information. The author compares columns built by the ancient Greeks with those characteristics of the other recognized important cultures and periods of architecture up to the modern day. The comparisons are on technical grounds concerned with form and use of materials, structural purpose and execution.
